

Automatic Oil Press with Vacuum Filtration

This automatic oil press integrates oil pressing and vacuum filtration into a single unit for efficient oil extraction. It is suitable for processing various oilseeds, yielding high-quality oil while removing impurities through its vacuum filtration system.

Overview

Advanced Oil Extraction System

This automatic oil press combines efficient extraction with integrated vacuum filtration to streamline your production process. Designed for versatility, it handles various oilseeds while automating temperature control to reduce energy consumption and machine wear. The integrated filtration system ensures that crude oil is purified immediately, delivering high-quality results in a single, continuous operation.

Performance

Production Capacity

330 kg/h

Hourly Capacity

8 T/24h

Daily Capacity

Oil Processing Sequence

- Oil seeds
- Cooking
- Pressing
- Filtration
- Crude oil output

Technical Features

Automation

Automatic Temperature Control • Electric Cabinet Operation

Filtration System

Integrated Vacuum Filtration

Design & Build

Mobility	Yes
Key Components	Rotary Wheels, Electric Control Cabinet, Vacuum Filter, Press Chamber
