

Automatic Over and Under Voltage Protection Device

This device automatically cuts off the load when mains supply voltage exceeds or falls below the rated voltage, protecting electrical equipment. When the voltage returns to normal, it automatically reconnects the power supply.

Product Overview

Smart Voltage Management

This automatic over and under voltage protection device is designed to safeguard sensitive electrical equipment from voltage fluctuations. When the mains supply exceeds or falls below the rated voltage, the device instantly cuts off power to prevent damage. Once conditions stabilize, it automatically reconnects the supply, ensuring continuous operation without manual intervention.

Technical Specifications

Certifications

CE

Compliance Standard

GB/T 21706-2008

Mounting Style

DIN rail

Protection Features

Over Voltage, Under Voltage, Automatic Recovery

Configuration

Supported Phase Types

- Single phase
- Three phase

Customization & Services

- Customized configurations
- OEM
- ODM
