

Automatic Pallet Stretch Wrapping Machine

This automatic stretch wrapping machine is designed for wrapping palletized loads. It features a rotating turntable and a film carriage that applies stretch film for securing goods during transport and storage.

Overview

Automatic Pallet Stretch Wrapping Machine

This automatic stretch wrapping machine is engineered for the efficient securing and stabilization of palletized loads for transport and storage. Featuring a robust rotating turntable and a vertical film carriage, it ensures consistent film application. Operators can utilize the integrated control panel to precisely adjust critical wrapping parameters such as film tension, overlap, and rotation speed.

Operational Features

Wrapping Parameters

- Film tension control
- Overlap adjustment
- Rotation speed control

Automation Level

Automatic

Design & Construction

System Components

Rotating Turntable, Vertical Film Carriage, Integrated Control Panel
