

Automatic Pressure Control Pump

Automatic pressure control pump designed for water pressure boosting and maintaining consistent water supply. Features a robust motor, pressure tank, and flexible connection hose for easy installation.

Product Overview

Professional Water Pressure Solution

The YCP158-A automatic pressure control pump is engineered to provide reliable water pressure boosting and maintain a consistent flow for various demanding environments. Designed for efficiency, this unit integrates a robust motor with a precision pressure tank to ensure steady operation. It features a versatile, flexible connection hose that facilitates quick and professional installation for both residential and light commercial plumbing setups.

Technical Specifications

Included Components

- Robust Electric Motor
- Pressure Tank
- Flexible Connection Hose

Model Number	YCP158-A
Compatible Applications	Residential, Light Commercial

Performance

Primary Function

Pressure Boosting • Consistent Flow Maintenance
