

Automatic Pump Control Unit with Pressure Gauge

This automatic control unit is designed for water pumps. It features power on, pump on, and failure indicator lights and includes a pressure gauge.

Product Overview

Intelligent Flow Management

This automatic pump control unit provides seamless, automated pressure management for water pump systems. By detecting real-time pressure demand, the unit ensures efficient operation and protection against system failure. Integrated indicator lights and a built-in pressure gauge provide operators with immediate status updates, making it an essential component for reliable water distribution.

Electrical Specifications

Supply Voltage	220V AC
Operating Frequency	50/60 Hz

Performance Metrics

Maximum Power

1.1 kW
Max Power Output

Maximum Pressure

1 MPa **10 bar**
Max Pressure Max Pressure

Operating Conditions

Max Operating Temperature	60 °C
---------------------------	-------

System Features

Included Components

- Automatic control unit
- Pressure gauge

Visual Indicators	Power On, Pump On, Failure Indicator
-------------------	--------------------------------------
