

Automatic Reciprocating Forming Machine

This machine is designed to meet diverse production requirements. Its special mold plate design ensures efficient operation, similar to double-cylinder models.

Product Overview

High-Efficiency Automated Forming

The ED-180105Y Automatic Reciprocating Forming Machine is a robust industrial solution designed for precision automated forming processes. Featuring a double-cylinder configuration, this machine ensures consistent performance and reliability for demanding production environments. Its heavy-duty construction and integrated cooling systems make it an ideal choice for operations requiring stable and continuous output.

Technical Specifications

Platen Area

1800 mm

Length

1050 mm

Width

2 mm

Thickness Capacity

Model Number

ED-180105Y

Machine Type

Double Cylinder Automatic
