Product Overview

Highlighted technical characteristics including patented structure and weather-resistant design.

High-Efficiency Automatic Solution

The PZ series is a fully automatic, self-priming water pump engineered for reliable performance in residential and commercial applications. Featuring a patented structure with a peripheral design, it provides efficient pressure boosting and water transfer capabilities. The system is designed for ease of use, including plug-and-play functionality and a rainproof, sunproof exterior suitable for diverse environmental conditions.

Key Features

Design Advantages

- Patented structure for optimal performance
- Same-side inlet and outlet for simplified installation
- Heat-dissipating lower breathable mesh
- Compact, low-noise design suitable for indoor/outdoor use

Core Characteristics

Self-Priming, Fully Automatic, Rainproof, Sunproof, Plug-and-Play, Pressure Adaptive

Technical Specifications

Suitable Applications

- Residential water supply
- Garden irrigation
- Pressure boosting systems
- Water transfer from shallow wells or tanks

Maintenance

Engineered for ease of installation and maintenance with readily accessible components and self-adaptive pipe network pressure settings.
