

Automatic Shrink Packaging Machine

This automatic shrink packaging machine is designed for high-speed and efficient packaging operations. It features a modular design and incorporates advanced control systems for precise performance.

Product Overview

High-Efficiency Automatic Shrink Packaging

The YCBS45 is a robust, fully automatic shrink packaging machine designed for high-speed industrial bundling. Engineered for items such as beverages, bottled water, and dairy products, this system offers versatile configurations with or without bottom support. Featuring advanced servo-controlled mechanisms and precise thermal management, it ensures reliable, high-strength packaging for demanding production environments.

Technical Specifications

Control System	B&R servo motor control system
Human-Machine Interface	8-inch LCD color screen
Suitable Applications	Beer, Beverages, Fruit Juice, Bottled Water, Dairy, Condiments

Key Features

Operational Advantages

- Unique film let-off mechanism with constant tension control
- Instantaneous film cutting and automated connecting
- Synchronized bottle and film feeding
- Optimized air circulation for consistent shrinkage
