Overview

Intelligent Leak Protection

The F104C Automatic Shut-off Valve is a precision-engineered solution designed for reliable flow control and leak prevention. It features advanced multi-point real-time monitoring that remains active even after power-off, ensuring continuous protection against water damage. Built for durability in industrial and residential settings, this valve automatically closes the inlet upon detecting abnormal conditions, minimizing potential overflow or spillage risks.

Operational Features

Monitoring Capabilities

- Multi-points real-time monitoring
- Leakage monitoring active after power-off
- Automatic inlet water shut-off

Status Indicators

Alarm Indicator, Normal Status Indicator, Manual Reset Button

Applications

Suitable Applications

Water Treatment • Chemical Processing • Industrial Flow Control • Leak Prevention Systems
