Product Overview

Efficient Water Softening Control

The Automatic Softener Valve is a precision-engineered component designed to automate the regeneration process for residential and light commercial water softening systems. It features a user-friendly digital display for easy programming and monitoring of critical system parameters, such as backwash duration and brine draw settings. Built from durable materials, this valve ensures reliable, long-lasting performance while optimizing water usage and salt consumption through precise cycle control.

Technical Features

Display Interface	Four-digit nixie tube display
Locating Technology	Optocoupler locating

Operational Modes

Bypass Capability	Yes
Bypass During Regeneration	Raw water bypassing during regeneration (except backwash)
Regeneration Modes	Time-clock initiated, Metered regeneration

System Compatibility

Suitable Applications Residential • Light Commercial	
System Compatibility	Compatible with standard softener tanks and distribution systems
