

Automatic Soy Milk Maker

This automatic soy milk maker features a funnel-shaped hopper for easy feeding and a cylindrical processing unit with a mesh filter. It includes separate collection containers for soy milk and pulp.

Overview

Efficient Soy Milk Production

This automatic soy milk maker is designed for streamlined processing, featuring a distinct funnel-shaped hopper and a cylindrical processing unit. It efficiently separates soy milk from pulp using an integrated mesh filter, ensuring a smooth final product. Its user-friendly design with transparent components and a clean color scheme makes it an ideal addition to professional food preparation environments.

Design & Build

Included Components

- Funnel-shaped hopper
- Cylindrical processing unit
- Integrated mesh filter
- Soy milk collection container
- Pulp collection container

Color Scheme	White, Light Green
Visibility Features	Yes
