

Automatic Stainless Steel Pressure Booster Pump

This automatic pressure booster pump is designed for water boosting applications. It features a stainless steel construction for durability and corrosion resistance, providing consistent water pressure for various household needs.

Product Overview

High-Performance Pressure Boosting

The Automatic Stainless Steel Pressure Booster Pump is a high-quality solution engineered for reliable water pressure management. Its robust stainless steel construction ensures long-term durability and resistance to corrosion, making it suitable for both residential and light commercial environments. Designed to provide consistent performance, this unit helps maintain stable water pressure for various household and professional water distribution needs.

Technical Specifications

Body Material	Stainless Steel
Intended Use	Residential, Light Commercial
Primary Function	Automatic water pressure boosting
