

Automatic Stirrup Bender

This automatic stirrup bender is designed for efficient and precise bending of steel wire into stirrups. It is suitable for high-volume production in construction and precast concrete industries.

Overview

High-Efficiency Stirrup Bending

This automatic stirrup bender is engineered for high-volume production in the construction and precast concrete sectors. Featuring an advanced CNC control system with an intuitive interface, the machine ensures precise fabrication of stirrups in various geometric shapes. Designed for the international market, it offers robust construction and reliable wire processing from coils.

Performance Metrics

Production Capacity

1800 pcs/h

Output Rate

1450 mm

Max Diagonal Stirrup Length

Technical Specifications

Power Requirements

30 Kw

Total Power

5 Kw/h

Average Consumption

Physical Dimensions

12000 x 3000 x 2000 mm

Machine Weight

3800 Kg

Capabilities

Fabrication Limits

Wire Type	Diameter Range
Single Wire	5-13 mm
Double Wire	5-10 mm

Features

Control System Features

- Advanced PLC Control
- Tilt Front Panel
- Autorun Mode
- Adjustable Feeding/Bending Speeds
- Graphic Visualization
- Cumulative Output Tracking

Certifications

ISO 9001, CE
