

Automatic Submerged Arc Welding Machine

This automatic submerged arc welding machine is designed for heavy-duty industrial applications. It features a robust power source with digital displays for precise control over welding parameters and is equipped with a wire feeder and flux hopper for continuous operation.

Product Overview

Industrial Welding Capability

The MZ-630 automatic submerged arc welding machine is engineered for heavy-duty industrial tasks requiring high precision and reliability. It features an integrated power source with digital displays for accurate monitoring of voltage and current settings. Designed for continuous production, the system includes a specialized wire feeder and flux hopper to maintain efficiency during extended operation cycles.

Technical Specifications

Core Operational Metrics

630 A

Rated Capacity

Key Components

- Digital voltage display
- Digital current display
- Integrated wire feeder
- Flux hopper system
- Mobile wheel base

Model Identification

MZ-630

Capabilities

Heavy-duty, Continuous Operation, Digital Precision, High Productivity
