

Automatic Transfer Switch for Power Management

This automatic transfer switch manages power sources in critical applications. It features multiple input and output terminals for connecting to different power sources and devices.

Overview

Intelligent Power Management

The Automatic Transfer Switch (ATS) is a robust solution designed for critical power management applications. It ensures seamless switching between multiple power sources, maintaining continuous operation for connected equipment. With a user-friendly interface and status monitoring capabilities, it provides reliable control for diverse network and power infrastructure needs.

Technical Specifications

Voltage Type

AC

Model Number

SED-800

Rated Voltage

220 V

Connectivity

Input Channels

4

Output Channels

4

Interface Types

Power Input, Power Output, Communication Interface

Design

Mounting Options

- Rack Mount
- Desktop

Monitoring Features

- Front Panel Indicator Lights
- Configuration Display Screen
