

Automatic Volumetric Filling and Packaging System

This automatic packaging machine uses volume measurement for product filling. The system integrates feeding, measuring, bag forming, sealing, and control functions for efficient operation.

Product Overview

Automatic Volumetric Filling and Packaging Solution

This advanced automatic packaging system utilizes precise volumetric measurement technology to streamline filling and pouch sealing operations. Engineered for efficiency, it integrates a comprehensive feeding mechanism, measurement unit, and bag-forming system into one cohesive unit. It is an ideal solution for packaging granular materials, powders, and small solid components with consistent accuracy.

Application Details

Compatible Product Types

Granular, Powder, Small solids, Liquids, Pastes

System Features

Key Components

- Feeding system
- Volumetric measuring unit
- Bag forming component
- Sealing unit
- Integrated control panel

Equipment Types

Available Filling Options

Oil filling • Liquid filling • Paste filling
