

Automatic Water Bottle Filling Machine

This automatic machine is designed for filling and sealing water bottles. Constructed from stainless steel, it features a multi-station carousel, filling nozzles, and a control panel.

Product Overview

High-Efficiency Bottling Solution

This automatic bottling machine is engineered for the precise filling and sealing of drinking water bottles in medium to large-scale operations. Constructed from durable stainless steel, it integrates a multi-station carousel and advanced filling nozzles to ensure consistent liquid dispensing. The system features a continuous conveyor and a built-in cleaning mechanism to uphold the highest hygiene standards for water production.

Key Performance Metrics

Performance Highlights

1 Unit

Automated System

Technical Design

Conveyor System

Continuous Flow • Integrated

Material

Stainless Steel

Bottle Handling

Multi-station carousel

Operation & Control

Core Functions

- Automatic bottle filling
- Precision sealing
- Liquid dispensing
- Integrated cleaning system

Control Interface

Integrated control panel for parameter adjustment

Compliance & Hygiene

Sanitation Standards

Stainless Steel Construction, Integrated Cleaning System, Hygienic Dispensing

Application

Production Scale

Medium to large-scale water bottling operations
