

# Automatic Water Bottle Washing Filling Capping Machine

This 3-in-1 machine efficiently washes, fills, and caps water bottles in a single, integrated process. It utilizes bottle-neck block technology to prevent contamination and accommodate various bottle sizes.

## Overview

### Integrated Bottling Solution

This 3-in-1 automatic machine performs integrated washing, filling, and capping for water bottling operations. Designed for high efficiency and precision, it utilizes bottle-neck block technology to prevent contamination and ensure compatibility with multiple bottle specifications. The system is engineered for reliable, long-term performance in demanding industrial environments.

## Performance

### Production Capacity

**3000 BPH**

Minimum Output

**36000 BPH**

Maximum Output

## Technical Specifications

### Key Technology

- Bottle-neck block technology
- Variable speed control
- Multi-spec bottle compatibility

### Machine Configuration

3-in-1 Integrated, Washing, Filling, Capping

### Control System

Frequency controlling electric motor
