

Automatic Water Pressure Booster Pump

This automatic water pump is designed for residential and light commercial use. It features a pressure tank for consistent water pressure and automatic start/stop operation.

Product Overview

High-Efficiency Pressure Booster System

This automatic water pressure booster pump is engineered for both residential and light commercial environments. It integrates a dedicated pressure tank to ensure consistent, reliable water flow and features intelligent automatic start/stop functionality based on real-time demand. Built for durability, it serves as an ideal solution for home utility, irrigation systems, and various applications requiring steady pressure regulation.

Technical Specifications

Core Features

- Automatic start/stop based on water demand
- Integrated pressure tank for consistent flow
- Durable motor construction
- Steady performance output

Suitable Applications

Residential, Light Commercial, Irrigation Systems
