

Automatic Water Pump Controller

This automatic pump control unit maintains constant water pressure. It is suitable for domestic water supply, irrigation, and pressure boosting, featuring an integrated electronic control system and indicator lights.

Product Overview

Smart Pressure Management

This automatic pump control unit is engineered to ensure consistent and reliable water pressure across domestic and industrial supply systems. It features an integrated electronic monitoring system that provides real-time status updates through clear indicator lights for power, operation, and system failure. Designed for versatility, it is an essential component for effective pressure boosting and irrigation management.

Technical Specifications

Operational Status Lights

- Power On
- Pump On
- Failure

Core Features

Electronic Control, Pressure Adjustment, Status Indicators, Easy Installation

Applications

Recommended Applications

- Domestic water supply
- Irrigation systems
- Pressure boosting applications

Design

Housing

Durable enclosure with threaded connections
