

Automatic Water Pump Pressure Controller

This electronic pressure control device is designed for automatic pump regulation. It maintains constant pressure in water systems by starting and stopping the pump based on demand, and includes dry-run protection and adjustable settings.

Product Overview

Automatic Water Pump Pressure Controller

This electronic pressure control device is engineered for seamless automatic pump management, ensuring constant pressure within water systems by intelligently starting and stopping the pump based on real-time demand. It includes essential safety features such as dry-run protection to prevent motor damage during water shortages. Its compact design allows for straightforward installation in various settings, including domestic water supply, irrigation, and pressure boosting systems.

Technical Features

Control Mechanism	Electronic
Safety Features	Dry-run protection, Automatic start/stop
Pressure Settings	Yes

Applications

Suitable Applications

- Domestic water supply
- Irrigation systems
- Pressure boosting systems
