

Automatic Water Pump Pressure Controller with Gauge

This automatic water pump pressure controller includes an integrated pressure gauge. It is designed to automatically start and stop the water pump according to set pressure thresholds.

Product Overview

Smart Pressure Management

The Automatic Water Pump Pressure Controller is designed for seamless water management in both residential and agricultural environments. Featuring an integrated pressure gauge, this device ensures consistent flow by automatically starting and stopping the pump based on established pressure thresholds. Its robust design offers long-term reliability and straightforward installation for professional-grade water system integration.

Technical Specifications

Key Features

- Automatic start/stop operation
- Integrated analog pressure gauge
- Robust, durable construction
- Easy installation

Operational Mode

Automatic

Applications

Suitable Applications

Residential Water Systems, Agricultural Irrigation, Pump Pressure Management
