

Automatic Water Pump Pressure Controller with Gauge

This automatic pressure controller is designed for water pumps. It features an integrated pressure gauge for monitoring system pressure and electronic control for automatic start/stop based on water demand.

Product Overview

Automatic Water Pump Pressure Controller

This automatic water pump pressure controller is designed to optimize the performance of water supply systems by providing precise electronic control. It automatically manages the start and stop functions based on real-time water demand, ensuring consistent pressure throughout your installation. Built for durability and reliability, it includes integrated protection features to prevent dry running, thereby extending the lifespan of your pump.

Technical Specifications

Key Features

- Integrated pressure gauge
- Electronic automatic start/stop control
- Dry-run protection
- Maintains consistent water pressure

Operational Status

Dry Run Protection • Automatic Monitoring

Application Compatibility

Water Pump Systems, Domestic Water Supply, Pressure Management
