

Automobile AC Evaporator for Toyota

This automobile evaporator is designed for Toyota vehicles. The component cools air before it enters the passenger compartment and features a fin and tube construction for efficient cooling.

Product Overview

High-Performance Automotive AC Evaporator

This universal automobile AC evaporator is engineered for reliable cooling performance in automotive HVAC systems. Featuring a high-efficiency fin and tube construction, it is designed to maximize heat transfer and ensure optimal cooling capacity within the passenger compartment. Built with high-quality materials, this component is constructed to withstand demanding conditions, including refrigerant exposure, temperature fluctuations, and continuous vibration.

Technical Specifications

Design Features

- Fin and tube construction
- High-efficiency heat transfer
- Universal fitment design

Durability Factors

Vibration Resistant • Temperature Stable • Refrigerant Compatible

Component Type	Automobile AC Evaporator
Compatibility	Toyota
