

Automobile Air Conditioning Evaporator Core

This is an air conditioning evaporator designed for automotive applications. It features aluminum fins and tubes for efficient heat exchange and reliable cooling.

Product Overview

High-Efficiency Evaporator Core

This automobile air conditioning evaporator core is engineered for optimal heat exchange and superior cooling performance. Featuring a robust construction with aluminum fins and tubes, it ensures reliable and long-lasting operation within automotive climate control systems. Each unit includes an integrated desiccant pack designed to effectively absorb moisture and maintain system integrity.

Technical Specifications

Included Components

- Evaporator Core
- Desiccant Pack

Construction Material

Aluminum Fins, Aluminum Tubes

Performance Features

Performance Highlights

1 High

Heat Exchange Efficiency

1 Integrated

Moisture Absorption

Application

Automotive • Air Conditioning
