

Automobile Brake Assembly with Rotor and Caliper

This automobile brake assembly includes a brake rotor and caliper. The rotor is a metallic disc that provides friction for braking, while the caliper houses the brake pads that clamp onto the rotor to slow or stop the vehicle.

Overview

High-Performance Brake Assembly

This automobile brake assembly is engineered for reliable stopping power and safety. Featuring a precision-machined metallic brake rotor and a durable caliper system, the unit is designed to provide consistent friction and heat dissipation. It integrates seamlessly with the vehicle's wheel hub via standard studs, making it a critical component for automotive maintenance and repair.

Technical Specifications

Included Components

- Brake Rotor
- Brake Caliper
- Mounting Studs

Component Type	Automobile Brake Assembly
Key Features	Smooth Surface Rotor, Integrated Caliper, Vehicle Hub Compatible
