

Automobile Electrical Control Module

This electrical control module is an essential component in automobiles, managing various electrical functions. It contains relays, fuses, and connectors that distribute power to systems such as lighting, wipers, and other accessories, ensuring the vehicle's electrical system operates efficiently and safely.

Product Overview

High-Quality Electrical Control Module

This right control mould is a specialized electrical component designed to manage and distribute power to critical vehicle systems. Engineered for reliability, it serves as a central hub for essential electronic functions including lighting and auxiliary equipment. This high-quality unit ensures the consistent performance and operational safety required for heavy-duty truck applications.

Technical Details

Quality Grade

High-Quality

Part Number

WG9719581022

Compatibility

Compatible Vehicle Types

- Heavy Trucks
- Medium-sized Trucks
- Light Trucks

Application Sectors

Military, Oil and Gas, Coal Transportation, Engineering
