

# Automobile Electronic Water Pump for Coolant Circulation

This automobile electronic water pump is engineered for circulating coolant efficiently in automotive engines. It is compatible with Audi A3/TT models.

## ADDITIONAL IMAGES

## Product Overview

### Automobile Electronic Water Pump

This electronic water pump is designed for precise coolant circulation, capable of automatically adjusting flow output based on vehicle operating states. It is engineered for versatility, serving new energy vehicle motor and battery cooling systems, as well as traditional combustion engine turbocharger and heater circuits. Featuring a German-sourced controller and a brushless motor, this unit ensures reliable performance, smooth operation, and extended service life.

## Technical Specifications

### Controller Grade

Vehicle Specification Level • German Engineering

### Motor Technology

Brushless DC Motor

## Application Compatibility

### Primary Applications

- New energy vehicle motor cooling
- Battery liquid cooling systems
- Battery heating circulation
- Turbocharger cooling
- Heater water circulation

## Cross Reference

### OEM Cross Reference
