Product Overview

High-Efficiency Electronic Cooling Solution

This automobile electronic water pump is engineered for precise flow control, automatically adjusting output based on the vehicle's operational state. Designed for versatility, it supports new energy vehicle cooling systems, including battery liquid cooling and motor thermal management, as well as traditional combustion engine applications like turbocharger and heater circulation. Featuring a brushless motor for extended service life and German-engineered controller components, this pump ensures reliable, smooth operation under demanding conditions.

Technical Specifications

Controller Component Origin

Vehicle Specification Level • German Engineering

Motor Technology

Brushless DC Motor

Compatibility

Compatible Models

- Touareg
- Q7

Cross Reference Part Number

7L0965561D

Compatible Vehicle Makes

Porsche, Volkswagen, Audi

Applications

Primary Applications

- New energy vehicle motor cooling
- Battery liquid cooling systems
- Battery heating circulation
- Turbocharger cooling
- Heater water circulation
