

Automobile Engine Connecting Rod

This connecting rod is designed for automobile engines. It is precision-engineered to ensure reliable power transmission and smooth engine operation.

Product Overview

High-Performance Engine Component

This automobile connecting rod is engineered for optimal performance and reliability in internal combustion engines. Manufactured using advanced forging and processing techniques, it ensures structural integrity and dimensional accuracy under demanding engine conditions. The component is designed to facilitate smooth power transmission and long-term durability for various automotive applications.

Manufacturing & Quality

Annual Production Capacity

500000 units

Annual Capacity

Core Competencies

- Scientific research and design
- Precision forging and processing
- Comprehensive testing methods
- Advanced manufacturing technology

Quality Certifications

ISO 9001:2000, IATF 16949

Technical Compliance

Yes
