

Automobile Engine Piston

This high-performance piston is designed for automobile engine applications. It is constructed from durable materials to withstand high combustion pressures and temperatures, ensuring reliable performance and extended engine life.

Product Overview

Engine Piston for CAT Y3229

This high-performance engine piston is engineered for durability and reliable operation in demanding automotive environments. Constructed from robust cast iron and steel, it offers excellent sealing and cooling effects to ensure efficient combustion. Designed to withstand high pressure and temperature, this component features advanced surface treatments including phosphating and nitriding to enhance wear resistance and longevity.

Technical Specifications

Material	Cast iron, steel
Hardness	HB210-280
Surface Treatment	Phosphating, Platform, Vulcanization, Nitriding

Compatibility & Identification

Engine Code	2992504
Car Model	CAT Y3229

Performance Features

Key Features

- Good sealing
- Good cooling effect
- Wear-resistant
- Steady performance
