

Automobile Engine Piston

This piston is engineered for enhanced engine performance and reliability. It features a precision-machined crown, ring grooves for optimal sealing, and a robust skirt for stability.

Product Overview

High-Performance Engine Piston

This automobile engine piston is precision-engineered for internal combustion engines, focusing on durability and optimal performance. Constructed from high-quality aluminum alloy, it ensures excellent heat dissipation and long-term reliability. The design features a precision-machined crown and robust skirt for stability, along with specialized recesses to support valve clearance and combustion optimization.

Technical Specifications

Material	Aluminum Alloy
Design Features	Precision-machined crown, Robust skirt, Ring grooves, Wrist pin bore
Part Number / ID	16501

Component Details

Included Components

- Automobile engine piston
- Wrist pin

Configuration

3 count

Crown Recesses
