Product Overview

High-Performance Automobile Engine Series

This series of automobile engines is engineered for reliability and consistent performance, featuring a displacement range of 1.3L to 1.6L. Designed to meet the demands of modern automotive assembly, these units support a high annual production capacity of 300,000 engines. They are currently integrated into a variety of domestic vehicle manufacturing lines and are actively expanding into global export markets.

Technical Specifications

Annual Production Capacity

300000 units

Units per Year

Key Technologies

- MIVEC (Innovative Valve timing Electronic Control system)
- Turbocharged induction
- Optimized valve timing

Displacement

1.3L - 1.6L

Engine Series

4G1 Series, 4G15 MIVEC Turbo
