

Automobile Window Regulator Mechanism

This is an automobile window regulator mechanism used for raising and lowering a vehicle's window. It features a motor assembly connected to a cable and track system.

Overview

Automobile Window Regulator Mechanism

This automobile window regulator mechanism is engineered to provide smooth and reliable window operation for vehicle doors. The assembly features a robust motor and gearbox system connected to a precision cable and track configuration. Designed for durability, it includes integrated mounting brackets to ensure stable installation and consistent performance in automotive applications.

Technical Specifications

Included Components

- Electric Motor
- Gearbox
- Cable System
- Guide Rails
- Mounting Brackets
- Mounting Hardware

Application

Automotive • Vehicle Door Assembly

Performance

Operation

Electric motor-driven cable and track system
