

Automotive AC Evaporator for Toyota

This automotive evaporator is designed for Toyota vehicles' air conditioning systems. It cools air using a series of fins and tubes that facilitate heat transfer.

Product Overview

High-Performance Automotive AC Evaporator

This automotive air conditioning evaporator is engineered for efficient cooling within vehicle HVAC systems. Designed with a robust series of fins and tubes, it facilitates optimal heat transfer by allowing refrigerant to absorb heat from incoming air before it reaches the passenger cabin. Constructed from durable aluminum alloy, this component offers excellent corrosion resistance and long-lasting performance in demanding automotive environments.

Technical Details

Material	Aluminum alloy
Key Features	Corrosion Resistant, Compact Design, High Heat Transfer Efficiency

Application

Compatibility	Toyota vehicles
Component Type	Universal Auto AC Evaporator
