

Automotive Alternator 14V 70A

This automotive alternator provides a 14V output and 70A current. It ensures reliable power for the vehicle's electrical system.

Overview

High-Performance Automotive Alternator

This alternator is engineered to provide reliable power generation for automotive electrical systems, ensuring consistent charging and stable voltage output. Featuring a robust construction with an efficient cooling system, it is designed for durability and longevity under various operating conditions. It includes an integrated voltage regulator and rectifier assembly to maintain optimal electrical system functionality in modern vehicles.

Electrical Specifications

Rated Voltage	14 V
Rated Current	70 A

Mechanical Specifications

Pulley Type	4PK
Model Identifier	JFZ168

Key Features

Integrated Components	Voltage Regulator, Rectifier Assembly, Efficient Cooling System
-----------------------	---
