

Automotive Battery Charger

This is a portable battery charger suitable for automotive applications. It is equipped with standard positive and negative terminals, indicator lights, and a carrying handle.

Overview

Reliable Power Solutions

This 12V battery charger is engineered for automotive applications, providing a dependable solution for maintaining battery health. Designed with portability in mind, it includes an integrated carrying handle and clear indicator lights to monitor charging status. Its robust construction ensures it is a practical tool for both professional workshops and emergency roadside assistance.

Technical Specifications

Rated Voltage

12 V

Voltage

Battery Capacity

34 AH

Model Identifier

POWER-2500

Features

Design Features

- Integrated carrying handle
- Visual indicator lights
- Standard positive and negative terminals

Application Suitability

Automotive, Portable Use, Battery Maintenance
