

Automotive Blade Fuse

Automotive blade fuses are designed to protect electrical circuits in vehicles from damage. They feature a transparent housing for visual inspection and metallic blades for easy installation.

Product Overview

Automotive Blade Fuse

These automotive blade fuses are essential components designed to protect vehicle electrical circuits from overcurrent and short circuits. Featuring a durable, transparent red housing, they allow for quick and easy visual inspection of the internal fuse element. Their standard design with two metallic blades ensures secure insertion into automotive fuse boxes and holders, making them a reliable choice for maintaining the integrity of various electrical components.

Physical Characteristics

Housing Color	Red
Design Type	Blade-style
Terminal Type	Dual metallic blades

Application

Primary Applications	Automotive, Circuit Protection, Electrical Systems
----------------------	--

Features

Inspection Method

Transparent Housing • Visual Check
