

# Automotive Blind Spot Detection System

This system uses ultrasonic sensors to detect objects in a vehicle's blind spots. It provides visual and audible alerts to the driver, enhancing safety.

## Product Overview

### Advanced Blind Spot Assistance

This automotive blind spot detection system is designed to significantly enhance vehicle safety by utilizing ultrasonic sensors to monitor blind spots. It provides drivers with both visual and audible alerts, with the audible frequency increasing as objects get closer. The complete kit includes a control module, a digital display for real-time distance readings, a wiring harness, and a set of sensors, making it a comprehensive safety solution.

## Technical Specifications

### Included Components

- Control Module
- Digital Display
- Wiring Harness
- Ultrasonic Sensors

Detection Technology	Ultrasonic Sensors
Alert Methods	Visual Alerts, Audible Alerts
Compatibility	Wide range of vehicles
