

Automotive Booster Cables with Color-Coded Clamps

These booster cables are designed for jump-starting vehicles in emergencies. They feature color-coded clamps and conform to DIN 72553 standards.

Product Overview

Professional Automotive Booster Cables

These high-performance booster cables are designed for reliable emergency roadside assistance and vehicle jump-starting. Constructed with high-quality Copper Clad Aluminum (CCA) wiring, they ensure efficient power transfer between batteries. Available in two distinct configurations, these cables feature color-coded clamps for safe and intuitive connections, meeting rigorous international safety standards.
