

Automotive Brake Disc

This automotive brake disc is designed for reliable and consistent stopping power. Its robust construction and efficient heat dissipation ensure optimal performance under various driving conditions.

Product Overview

High-Performance Automotive Brake Disc

This automotive brake disc is engineered for superior braking performance and long-term reliability. Featuring a precision-machined ventilated design, it effectively dissipates heat to prevent deformation and reduce brake fade, ensuring consistent stopping power. The grooved surface architecture provides a stable braking experience by minimizing jitter, making it an essential component for demanding automotive applications.

Key Features

Performance Benefits

- Shortened braking distance
- Enhanced heat dissipation
- Groove design for reduced brake jitter
- High-precision pore diameter for deviation-free mounting

Technical Specifications

Design Type

Ventilated • Grooved

Durability Features

Heat Resistant, Wear Resistant, Corrosion Resistant
