Product Overview

High-Performance Automotive Brake Discs

These precision-engineered brake discs are designed for optimal performance across a wide range of vehicles, including cars, trucks, and trailers. Manufactured using high-quality gray iron (HT-250), they offer superior heat dissipation, consistent friction coefficients, and low-noise operation. With rigorous quality control measures, including 100% dimension inspection and dynamic balance testing, these discs provide reliable stopping power and long service life for demanding driving conditions.

Technical Specifications

Material Composition

Element	Percentage
Carbon (C)	3.0-3.3%
Silicon (Si)	1.6-1.9%
Manganese (Mn)	0.7-0.9%
Phosphorus (P)	<12%
Sulfur (S)	<0.12%

Mechanical Properties

240 HB Maximum Hardness	210 N/mm² Tensile Strength
-----------------------------------	-------------------------------------------------

Casting & Machining Standards

Gray Iron HT-250, SAE-j431 Machining Standard, G3000 American Standard

Compliance & Logistics

Certifications

ISO9001:2008 • ISO/TS16949:2009 • SGS

Monthly Capacity	20000 pieces
HS Code	8708309990
Minimum Order Quantity	100 pieces

Compatibility

Compatible Vehicle Makes

- Ford
- Buick
- Volvo
- Saab
- Cadillac
- Chevrolet
- Chrysler
- VW
