

Automotive Brake Pads with Wear Sensors

These brake pads offer optimal stopping power and are designed for durability. They feature integrated wear sensors that alert drivers when pad replacement is necessary.

Product Overview

High-Performance Braking Solution

These automotive brake pads are engineered for optimal stopping power and exceptional durability across various driving conditions. Each unit features an integrated wear sensor, providing crucial alerts to drivers when maintenance is required. Manufactured to meet or exceed OEM specifications, they ensure a precise fit and reliable performance for a wide range of vehicle makes and models.

Technical Specifications

Compliance Standards	GB5763-1998
Component Type	Brake Pads with Wear Sensors

Key Features

Performance Highlights

- Integrated wear sensors for safety monitoring
- Robust friction material formulation
- Consistent braking performance
- OEM specification compliance
