Product Overview

High-Performance Automotive Brake Shoes

These automotive brake shoes are engineered for reliable stopping power in drum brake systems. Featuring high-quality friction material bonded to a robust metal backing plate, they are designed to ensure efficient heat dissipation and consistent performance. Suitable for a wide range of car and truck applications, these components offer durability and safety for demanding driving conditions.

Compatibility & Application

Compatible Vehicles

Passenger Cars, Trucks

Technical Features

Design Highlights

- Friction material bonded to metal backing
- Includes parking brake lever mechanism
- Engineered for heat dissipation
- Reduced brake fade characteristics

System Type

Drum Brake System
