

Automotive Clutch Assembly

This clutch assembly is engineered for enhanced torque capacity and improved shifting performance. It ensures optimal power transfer and durability under demanding conditions.

Overview

High-Performance Clutch Assembly

This high-performance clutch assembly is precision-engineered for demanding automotive applications. It features a robust construction including a metallic pressure plate, friction disc, and release bearing to ensure optimal power transfer. Designed for enhanced torque capacity and improved shifting performance, it is an ideal solution for high-performance vehicles and racing environments where durability under stress is critical.

Technical Specifications

Included Components

- Metallic Pressure Plate
- Friction Disc
- Release Bearing

Key Performance Benefits

Enhanced Torque Capacity • Improved Shifting • High Durability

Application Suitability

High-performance vehicles, Racing applications, Automotive
