

Automotive Clutch Assembly

This is a high-performance clutch assembly designed for automotive applications. The pressure plate applies force to the friction plates, engaging the clutch and transmitting power from the engine to the transmission.

Overview

High-Performance Clutch Assembly

This high-performance clutch assembly is engineered to provide superior performance and durability compared to standard stock components. The system features a lightweight aluminum basket designed to reduce rotational inertia, enhancing engine response. Built with durable, heat-resistant friction plates and precision-engineered steel separator plates, it ensures reliable power transmission from the engine to the transmission under demanding conditions.

Technical Specifications

Material Composition

- Lightweight Aluminum (Clutch Basket)
- High-Friction Durable Material (Friction Plates)
- Steel (Separator Plates)

Included Components

Clutch Basket, Pressure Plate, Friction Plates, Steel Plates

Performance Metrics

Key Performance Advantages

1 Yes

Reduced Rotational Inertia

1 Yes

Enhanced Heat Resistance

1 Yes

Improved Durability
