

Automotive Clutch Cover

This clutch cover is a critical component in the vehicle's transmission system, engaging and disengaging the engine from the drivetrain. Its design ensures efficient power transfer and smooth gear changes.

Product Overview

Precision-Engineered Clutch Cover

The STC-077 clutch cover is a critical transmission component designed for reliable engagement and disengagement of the engine from the drivetrain. Featuring robust construction with perimeter-arranged pressure springs, it delivers consistent clamping force for efficient power transfer. This unit is precision-engineered to meet or exceed OEM specifications, ensuring durability and smooth gear changes for automotive applications.

Technical Details

Key Design Features

- Robust construction
- Perimeter-arranged pressure springs
- Integrated release levers/fingers
- OEM-compliant performance

Model Number	STC-077
Application	Automotive, Transmission System
