

Automotive Clutch Disc

High-performance clutch disc designed for automotive applications. It features robust friction material for enhanced grip and durability, along with a sprung hub to dampen vibrations.

Overview

High-Performance Automotive Clutch Disc

This high-performance clutch disc is engineered for demanding automotive applications, offering a reliable solution for power transmission. It features robust friction material designed for enhanced grip and long-term durability, ensuring consistent performance. The integrated sprung hub effectively dampens vibrations to reduce operational noise, while the precision-engineered spline guarantees optimal power transfer across various driving conditions.

Technical Specifications

Key Features

- Robust friction material for enhanced grip
- Sprung hub for vibration dampening
- Precision-engineered spline
- Noise reduction design

Performance Highlights

1 High

Durability Rating

1 Integrated

Vibration Dampening

Part Identification

CA192

Compatibility

GM
