

Automotive Clutch Friction Disc

This clutch friction disc is designed for use in automotive clutch systems. It features evenly spaced rectangular slots and mounting blocks around the perimeter.

Product Overview

Automotive Clutch Friction Disc

This automotive clutch friction disc is engineered for reliable power transmission within vehicle clutch systems. Constructed from durable metal, likely steel or iron, the component features a robust matte finish suitable for demanding automotive environments. Its design includes a central opening and precision-engineered mounting blocks with through-holes to ensure secure installation and optimal performance.

Technical Specifications

Surface Finish

Matte

Material

Steel/Iron

Mounting Points

4 points

Design Features

Circular, Central Opening, Perimeter Slots
