

Automotive Clutch Hydraulic Pump

This central clutch pump is a key part of automotive clutch systems, transmitting hydraulic pressure. It ensures reliable performance and extends lifespan in diverse driving conditions.

Product Overview

Central Clutch Pump

This central clutch pump is a vital component within automotive clutch systems, engineered to transmit hydraulic pressure from the master cylinder to the clutch release mechanism. Its design facilitates smooth and efficient gear changes, contributing to overall driving performance. Built to meet stringent quality standards, this unit ensures reliable operation and an extended service life across diverse driving conditions.
